### MESSAGE

Molecular medicine or molecule based (personalized) medicine is a broad field, where physical, chemical, biological and medical techniques are used to describe molecular structures and mechanisms, identify fundamental molecular and genetic errors of disease to develop molecular interventions to correct them. This new scientific discipline has a vast potential having its scope widened considerably over the years to diverse disciplines like Genomics, Nano-biotechnology, Cancer Biology, Biomaterials, Tissue Engineering and so on.

“Trends in Molecular Medicine's” objective is to facilitate communication between different groups of professionals with distinct backgrounds and skills.

The Conference will bring together distinguished experts with varying perspectives from industries and academia and is expected to provide a glimpse into the extremely wide field that molecular medicine covers.

The 2 day conference comprises of eminent personalities from India and abroad, presenting their views through paper and poster presentations. This will be a unique opportunity to understand the current approaches in Molecular Medicine and discuss how these developments could help the future of molecular medicine, particularly in biopharmacology research.
